# **Chapter 1** Section 2 Exercises

1. How many substrings aab are in  $ww^Rw$ , where w=aabbab.

Solution. Because

$$w^R = babbaa, \qquad ww^R w = aabbabbabbaaaabbab,$$

there are two substrings aab in  $ww^Rw$ .

**2.** Use induction on n to show that  $|u^n| = n|u|$  for all strings u and all n.

## Proof.

1. Basis

If n = 0, then

$$|u^1| = |u|, \qquad 1 \cdot |u| = |u|.$$

Therefore,

$$|u^1| = 1 \cdot |u|.$$

2. Inductive Assumption

Assume that for  $i = 0, 1, 2, \cdots, n$ 

$$|u^i| = i \cdot |u|.$$

3. Inductive Step

For i = n + 1,

$$|u^{n+1}| = |u^n u| = |u^n| + |u| = n \cdot |u| + |u| = (n+1)|u|.$$

Thus,  $|u^n| = n|u|$  for all strings u and all n.

**3.** The reverse of a string, introduced informally above, can be defined more precisely by the recursive rules

$$a^R = a,$$

$$(wa)^R = aw^R,$$

for all  $a \in \Sigma, w \in \Sigma^*$ . Use this to prove that

$$(uv)^R = v^R u^R,$$

for all  $u, v \in \Sigma^+$ .

#### Proof.

#### 1. Basis

For |v|=1, suppose that  $v=a, a \in \Sigma$ 

$$(uv)^R = (ua)^R = au^R = v^R u^R.$$

## 2. Inductive Assumption

Suppose that for  $|v| = 1, 2, \dots, n$ 

$$(uv)^R = v^R u^R.$$

#### 3. Inductive Step

For i = n + 1, suppose that  $v = wa, a \in \Sigma$ 

$$(uv)^R = (uwa)^R = a(uw)^R = aw^R u^R = v^R u^R.$$

Thus,

$$(uv)^R = v^R u^R,$$

for all  $u, v \in \Sigma^+$ .

**4.** Prove that  $(w^R)^R = w$  for all  $w \in \Sigma^*$ .

# Proof.

#### 1. Basis

For |w| = 0, which means that  $w = \lambda$ ,

$$(\lambda^R)^R = (\lambda)^R = \lambda = w.$$

#### 2. Inductive Assumption

Suppose that for  $|w| = 1, 2, \dots, n$ 

$$(w^R)^R = w.$$

# 3. Inductive Step

For i = n + 1, suppose that  $w = va, a \in \Sigma$ 

$$(w^R)^R = ((va)^R)^R = (av^R)^R = (v^R)^R a = va = w.$$

Thus,  $(w^R)^R = w$  for all  $w \in \Sigma^*$ .

5. Let  $L = \{ab, aa, baa\}$ . Which of the following strings are in  $L^*$ : abaabaaabaa, aaaabaaaa, baaaaabaaaab, baaaaabaa? Which strings are in  $L^4$ ?

Solution.

$$abaabaaabaa = ab|aa|baa|ab|aa \in L^5;$$
  $aaaabaaaa = aa|aa|baa|aa \in L^4;$   $baaaaabaaaab \notin L^*;$   $baaaaabaa = baa|aa|ab|aa \in L^4.$ 

**6.** Let  $\Sigma = \{a, b\}$  and  $L = \{aa, bb\}$ . Use set notation to describle  $\overline{L}$ .

Solution.

$$\overline{L} = \{\lambda, a, b, ab, ba\} \cup \{w \in \{a, b\}^+ : |w| \ge 3\}.$$

7. Let L be any language on a nonempty alphabet. Show that L and  $\overline{L}$  cannot both be finite. **Proof.** Suppose that both L and  $\overline{L}$  are finite. Therefore,  $L \cup \overline{L}$  is also finite. However,  $L \cup \overline{L} = \Sigma^*$  is an infinite set, which leads to a contradiction. Thus, L and  $\overline{L}$  cannot both be finite.
